ANALYTICAL SIGMA

WEBSITE DESIGN & DEVELOPMENT PROPOSAL

SIBANYE ENGINEERING SOLUTIONS

Prepared by: Analytical Sigma (Pty) Ltd
Date: 6 October 2026
Proposal Validity: 30 Days

1. EXECUTIVE SUMMARY

Analytical Sigma (Pty) Ltd is pleased to submit this proposal to **Sibanye Engineering Solutions (SES)** for the design and development of a new corporate website.

The proposed website will provide Sibanye Engineering with a modern, professional and high-performance digital presence that reflects the company's engineering expertise, project experience and growing position within the Southern African infrastructure market.

The new website will retain the professional credibility of the existing website while introducing a significantly improved user experience, stronger visual presentation, improved project showcasing, responsive mobile design and a clearer path for prospective clients to engage with the company.

The website will be designed to position Sibanye Engineering as a **credible multidisciplinary engineering advisory and project-management practice**, rather than simply as a company with an online brochure.

2. OUR UNDERSTANDING OF SIBANYE ENGINEERING

Sibanye Engineering Solutions operates as a multidisciplinary engineering practice with capabilities spanning civil engineering advisory services, project management, water infrastructure, transportation, mining engineering, structures and energy.

The company's 2026 Capability Statement further identifies capabilities in areas including industrial and commercial buildings, programme management and project management.

The company's stated mission is to provide cutting-edge and innovative solutions that create shared value for clients and stakeholders, while its vision is to become an internationally respected engineering advisory firm offering sustainable solutions.

The new website will therefore be developed around four core themes:

Engineering Excellence
Demonstrating technical capability and multidisciplinary expertise.

Infrastructure Impact
Showcasing projects that contribute to infrastructure development.

Professional Credibility
Presenting leadership, experience, clients and professional capabilities.

Sustainable Growth
Providing a digital platform capable of supporting future business development.

3. PROJECT OBJECTIVES

The new website will aim to:

1. Modernise Sibanye Engineering's digital presence.
2. Clearly communicate the company's services and areas of expertise.

3. Showcase major completed and current project experience.
4. Strengthen the company's corporate credibility.
5. Improve the experience for prospective clients and partners.
6. Provide an effective project enquiry mechanism.
7. Ensure a strong mobile and tablet experience.
8. Establish a foundation for search-engine visibility.
9. Allow the website to grow with the business.
10. Present Sibanye Engineering as a modern Southern African engineering practice.

4. PROPOSED DESIGN DIRECTION

The website will use a **premium engineering and infrastructure aesthetic**.

The visual direction will combine:

- High-quality engineering and infrastructure imagery
- Strong typography
- Clean layouts
- Generous use of whitespace
- Project statistics
- Modern service cards
- Professional project galleries
- Subtle animation and transitions
- Technical/engineering-inspired visual elements
- Clear calls-to-action

The design will avoid the appearance of a generic construction template.

Instead, the website will communicate:

> **Precision. Engineering. Infrastructure. Sustainability. Confidence.**

The objective is to create a digital presence that feels appropriate for an engineering consultancy working on significant infrastructure projects.

5. PROPOSED WEBSITE STRUCTURE

5.1 HOME

The homepage will provide an immediate introduction to Sibanye Engineering.

Proposed sections include:

Hero Section

A high-impact engineering/infrastructure visual with a concise positioning statement.

Proposed direction:

> **Engineering Infrastructure. Enabling Sustainable Progress.**

Supporting statement:

> Multidisciplinary engineering, project management and infrastructure advisory services delivering practical solutions across Eswatini and Southern Africa.

Primary call-to-action:

Discuss Your Project

Secondary call-to-action:

Explore Our Capabilities

Additional homepage sections

- Company introduction
- Core capabilities
- Services
- Featured projects
- Market sectors
- Key statistics
- Leadership
- Client/partner references
- Call to action
- Contact information

6. ABOUT SIBANYE ENGINEERING

A dedicated corporate profile will present:

- Company overview
- Mission
- Vision
- Values
- Professional approach
- Geographic presence
- Areas of expertise
- Market sectors

The company's capability statement identifies its vision as becoming an internationally respected engineering advisory firm offering sustainable solutions.

This positioning will be incorporated into the site's corporate narrative.

7. OUR SERVICES

Services will be organised into clear digital categories.

Civil Engineering

Civil engineering advisory, infrastructure design and engineering support.

Water & Sanitation

Water infrastructure, pipelines, pumping systems and sanitation-related infrastructure.

Transportation

Transportation infrastructure, roads, drainage and associated civil works.

Energy

Renewable energy, solar PV, petroleum infrastructure and energy project services.

Structural Engineering

Structural design and engineering for buildings, bridges and infrastructure.

Mining Engineering

Engineering services supporting mining and associated infrastructure.

Project & Programme Management

Project management, programme management, construction supervision, quality assurance and project controls.

Industrial & Commercial Buildings

Civil and structural engineering services for industrial and commercial developments.

Each service will have a clear description and relevant project references where information is available.

8. PROJECT PORTFOLIO

The project portfolio will be one of the principal features of the new website.

Rather than simply listing previous work, selected projects will be presented as structured digital case studies.

Each case study may include:

- Project name
- Client
- Location
- Sector
- Project value
- Services provided

- Project description
- Scope of work
- Project imagery
- Relevant engineering discipline

The capability statement contains substantial project experience that can be transformed into this format.

Examples include:

- Mkhondvo-Ngwavuma Water Augmentation Programme
- Manzini Region Sustainable Water Supply
- Ridgeview Township Roads
- Sicholo Street and associated drainage works
- MR3 pedestrian bridges
- Unifoods Factory Shell
- Buy Cash Warehouse
- National Healthcare Waste Facility
- Emandla Solar Photovoltaic Plant
- Nsoko Solar PV Project
- Lavumisa Border Project

The capability statement records significant project experience, including projects valued at E967 million, E360 million, E500 million and other major infrastructure assignments.

9. MARKET SECTORS

The website will present Sibanye Engineering's experience across relevant market segments.

Potential categories include:

- Water & Sanitation
- Energy
- Transportation
- Mining
- Infrastructure
- Structures
- Industrial & Commercial
- Healthcare
- Agriculture

The capability statement identifies experience across health, agriculture, mining, energy, water infrastructure, commercial and industrial sectors and transportation.

10. LEADERSHIP

A dedicated leadership section will present the company's key professionals.

Profiles will include, where approved by SES:

- Professional photograph
- Name
- Position
- Qualifications
- Professional registrations
- Areas of expertise
- Relevant experience

The current capability statement identifies **Nkonyane Musa Pr Eng PMP®, MBA, MEng, MSAICE, MSANCOLD, MWISA** as Managing Partner and **Frans Pienaar Pr Eng, BEng (Civil), MSAICE** as Business Development Director & Partner.

11. CLIENTS & PROJECT PARTNERS

The website will include a dedicated credibility section for selected clients and project partners.

Where appropriate and subject to permission, approved logos may be displayed.

The capability statement references organisations including:

- Eswatini Water Services Corporation
- Eswatini Water and Agricultural Development Enterprise
- Eswatini Electricity Company
- Eswatini Energy Regulatory Authority
- Eswatini Revenue Authority
- United Nations Development Programme
- Inyatsi Construction
- NERCHA
- Matsapha Town Council
- The Luke Commission

12. CAPABILITIES

A dedicated capabilities section will communicate the broader professional and project-delivery expertise of Sibanye Engineering.

This will include areas such as:

- Engineering advisory
- Project management

- Programme management
- Construction supervision
- Quality assurance
- Quality control
- Budget management
- Risk assessment
- Contract management
- Project controls
- Renewable energy
- Infrastructure development

The capability statement specifically references FIDIC, JBCC, GCC, NEC and EPC contract management, together with projected cash flows, quality control/assurance, budget management, risk assessment and construction supervision.

13. OUR APPROACH

A visual project lifecycle will explain the Sibanye Engineering approach.

01 — Understand

Understand the client's objectives, requirements and constraints.

02 — Assess

Evaluate technical, commercial and project considerations.

03 — Engineer

Develop practical and sustainable engineering solutions.

04 — Plan

Establish programme, budget, risk and delivery requirements.

05 — Deliver

Support project implementation and construction.

06 — Assure

Provide quality, monitoring and project controls.

07 — Close

Support completion, handover and close-out.

14. PROJECT ENQUIRY SYSTEM

The website will include a professional project enquiry form.

Prospective clients will be able to provide:

- Name
- Organisation
- Email
- Telephone
- Project location
- Required service
- Sector
- Project stage
- Project description
- Supporting information

The form will be configured to route enquiries to the designated Sibanye Engineering contact.

This will provide a more structured mechanism for converting website visitors into potential business opportunities.

15. CONTACT & LOCATION

The website will clearly display the company's approved contact information.

Sibanye Engineering Solutions

Suite NC202 / 203C
Nedbank Centre, Swazi Plaza
Corner Sozisa & Dr Sishayi Road
Mbabane, Eswatini

Telephone:

+268 2404 5512
+268 7802 4964

The capability statement also identifies a South African presence in Bryanston, Sandton, allowing the website to communicate the company's broader Southern African footprint where appropriate.

16. RESPONSIVE DESIGN

The website will be optimised for:

- Desktop computers
- Laptops
- Tablets
- Smartphones

The mobile experience will receive particular attention to ensure that project information, services and enquiry functionality remain easy to access.

17. SEARCH ENGINE OPTIMISATION

The website will include a foundational SEO implementation consisting of:

- Search-friendly page structures
- Page titles
- Meta descriptions
- Proper heading structure
- Descriptive URLs
- Optimised images
- Internal linking
- XML sitemap
- Robots configuration
- Open Graph metadata
- Search-engine indexing configuration

The website will be structured around relevant engineering and infrastructure search themes.

18. SECURITY & PERFORMANCE

The website will be developed with security and performance as core requirements.

Implementation will include:

- HTTPS/SSL compatibility
- Secure form handling
- Input validation
- Spam protection
- Security configuration
- Optimised images
- Lazy loading where appropriate
- Performance optimisation
- Browser compatibility testing
- Backup configuration where supported by the hosting environment

19. WEBSITE MANAGEMENT

The website will be developed in a manner that allows approved future updates.

Potential future content areas include:

- New projects
- Company news
- Engineering insights
- Careers

- Announcements
- New services
- Leadership updates

20. FUTURE DIGITAL FEATURES

The architecture will allow future functionality to be introduced as the business grows.

Potential future enhancements include:

AI Website Assistant

An AI-powered assistant capable of helping visitors identify relevant services and initiate project enquiries.

Project Search

Visitors could filter projects according to:

- Sector
- Location
- Service
- Project type

Careers Portal

Future recruitment vacancies and online applications.

Engineering Insights

A knowledge centre for company announcements, engineering articles and infrastructure insights.

These features are considered **future enhancements** and are not included in the initial website development fee unless specifically agreed.

21. TECHNOLOGY

Analytical Sigma will select an appropriate modern web technology architecture based on:

- Performance
- Security
- Maintainability
- Scalability
- SEO
- Hosting requirements
- Future functionality

The final technology stack will be confirmed during project initiation.

22. PROJECT DELIVERABLES

The project will include:

1. Website discovery and planning
2. Information architecture
3. UX/UI design
4. Responsive website development
5. Homepage
6. About section
7. Leadership section
8. Services section
9. Market sectors
10. Project portfolio
11. Project case-study layout
12. Capabilities section
13. Clients/partners section
14. Contact page
15. Project enquiry form
16. Capability statement download
17. WhatsApp integration
18. Foundational SEO
19. Performance optimisation
20. Security configuration
21. Analytics integration
22. Browser/device testing
23. Deployment
24. Initial post-launch support

23. CONTENT MIGRATION

Existing approved information from Sibanye Engineering's current website and capability statement will be used as the foundation for the new website.

This includes:

- Company information
- Services
- Leadership
- Project references
- Market segments
- Client references
- Mission

- Vision
- Contact information

Sibanye Engineering will be responsible for providing or approving:

- Final company wording
- Current photographs
- Leadership photographs
- Project photographs
- Logo and brand assets
- Final project information
- Approved client logos
- Any additional documentation

No unverified project claims, qualifications, client relationships or project values will be published without approval.

24. PROJECT IMPLEMENTATION

The project will be delivered in the following stages.

Phase 1 — Discovery & Planning

Requirements confirmation, content review and website architecture.

Phase 2 — UX/UI Design

Development of the visual direction and principal page layouts.

Phase 3 — Development

Construction of the responsive website and functional components.

Phase 4 — Content Integration

Integration of approved company, service and project content.

Phase 5 — Testing & Quality Assurance

Testing of:

- Navigation
- Forms
- Mobile responsiveness
- Desktop browsers
- Tablet devices
- Performance
- Security
- Basic SEO
- Contact functionality

Phase 6 — Deployment

Production deployment and final verification.

Phase 7 — Handover

Website handover and basic operational guidance.

25. PROJECT TIMELINE

Subject to timely provision and approval of content:

Phase	Estimated Duration
Discovery & Planning	2–3 days
UX/UI Design	3–5 days
Development	7–10 days
Content Integration	3–4 days
Testing & QA	2–3 days
Deployment	1 day
Estimated Total	**3–4 weeks**

The timeline may change if additional content, revisions or functionality are introduced.

26. INVESTMENT

Website Design & Development

E9,500.00 once-off

The above investment includes the complete website development scope described in this proposal.

This includes design, development, responsive optimisation, project portfolio functionality, enquiry functionality, SEO foundations, security configuration, testing and deployment.

27. MANAGED WEBSITE HOSTING & CARE

To ensure the website remains available, secure and properly maintained, Analytical Sigma can provide managed website hosting and technical care.

E2,500.00 per year

The annual package includes:

- Managed website hosting
- SSL configuration

- Website backups
- Basic uptime monitoring
- DNS management
- Website health checks
- Basic security monitoring
- Minor technical corrections
- Basic hosting support

The hosting package does not include major website redesigns, new modules, extensive content creation or third-party subscription fees.

28. DOMAIN & THIRD-PARTY SERVICES

Domain registration/renewal and third-party services will be charged separately where applicable.

Examples may include:

- Domain registration
- Premium stock imagery
- Professional photography
- Email services
- Third-party software subscriptions
- Paid API services
- External SaaS services

Where possible, Analytical Sigma will seek approval before introducing additional third-party costs.

29. PAYMENT TERMS

The proposed payment schedule is:

Milestone	Percentage	Amount
Project commencement	50%	E4,750
Design/development milestone	30%	E2,850
Final approval & deployment	20%	E1,900
Total	**100%**	**E9,500**

Annual hosting and website care will be invoiced separately.

30. POST-LAUNCH SUPPORT

The website will include **90 days of initial post-launch support** covering defects or issues relating to the agreed development scope.

This does not include new functionality, major content changes or redesign requests introduced after approval.

Ongoing support can continue under the annual Managed Website Hosting & Care package.

31. CLIENT RESPONSIBILITIES

Sibanye Engineering will be responsible for:

- Providing approved company information
- Providing approved imagery and logos
- Providing/confirming project information
- Reviewing designs within agreed timelines
- Providing consolidated feedback
- Approving final website content
- Confirming authorised website contacts
- Providing access to required domain/hosting resources where applicable

Delays in receiving required content or approvals may affect the project timeline.

32. ASSUMPTIONS

This proposal assumes:

- One corporate website for Sibanye Engineering Solutions.
- Content will primarily be derived from existing approved company materials.
- Project information and photographs will be supplied or approved by SES.
- The website will be developed in English.
- The agreed functionality will remain within the scope described above.
- Major additional functionality will be quoted separately.

33. VALUE TO SIBANYE ENGINEERING

The proposed website is intended to provide value beyond simply having an online presence.

It will give Sibanye Engineering a platform for:

Business Development

Potential clients can understand the company's capabilities and submit project enquiries.

Tender & Proposal Support

The website can reinforce the company's credibility when prospective clients or partners research SES.

Corporate Credibility

Major projects, leadership, services and client references will be presented in a structured professional format.

Brand Positioning

The website will communicate Sibanye Engineering as a modern engineering advisory practice.

Future Growth

The platform can later be expanded with additional projects, insights, careers and digital services.

34. SUCCESS CRITERIA

The completed website should:

1. Clearly communicate Sibanye Engineering's identity and capabilities.
2. Present the company as a professional engineering consultancy.
3. Showcase significant project experience effectively.
4. Make services easy to understand.
5. Provide a clear path to project enquiries.
6. Work effectively across desktop and mobile devices.
7. Provide a strong foundation for search visibility.
8. Maintain a professional and consistent visual identity.
9. Be secure, performant and maintainable.
10. Provide a foundation for future digital expansion.

35. CONCLUSION

Sibanye Engineering has an extensive body of engineering and infrastructure experience.

Its capability statement demonstrates involvement across water infrastructure, transportation, structures, energy, project management and other important infrastructure sectors. The documented portfolio includes major projects such as the Mkhondvo-Ngwavuma Water Augmentation Programme, Emandla Solar PV Plant, transportation infrastructure, structural projects and industrial developments.

The proposed website will transform this experience into a modern digital platform that communicates:

Expertise. Experience. Infrastructure. Sustainability.

The goal is not simply to replace the existing website.

The goal is to create a digital presence that better represents **the calibre of Sibanye Engineering's work and its ambitions for the future.**

36. COMMERCIAL SUMMARY

Item	Investment
Website Design & Development	**E9,500 once-off**
Managed Website Hosting & Care	**E2,500/year**

Item	Investment
Domain	At applicable cost
Third-party services	As applicable
First-year core investment	**E12,000 + domain/third-party services**

ACCEPTANCE

Should Sibanye Engineering Solutions wish to proceed, Analytical Sigma will initiate the project following confirmation of the scope and receipt of the initial project payment.
