"CREATING BUILT ENVIRONMENT SOLUTIONS THROUGH SERVICE EXCELLENCE"

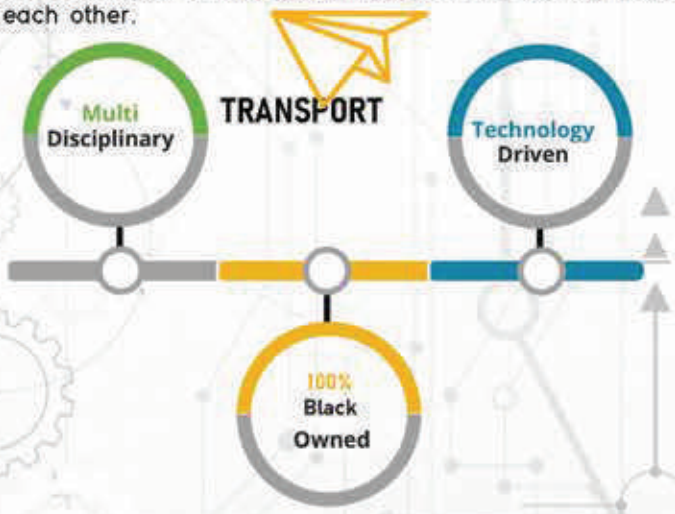

MUSA NKONYANE
Pr Eng PMP®

About Us

SES is a multi-disciplinary engineering practice firm based in the Kingdom of Eswatini, South Africa and Botswana. The firm offers a wide range of market solutions: These include;

- CIVIL ENGINEERING CONSULTANCY SERVICES
- TRANSPORTATION
- WATER INFRASTRUCTURE
- ENERGY
- MINING ENGINEERING
- INDUSTRIAL & COMMERCIAL BUILDINGS
- PROGRAMME MANAGEMENT
- PROJECT MANAGEMENT

Our passion is to design and advise on Infrastructure development projects that enable the creation of the future of life. Simply put: we get excited at carving out business-driven solutions that have a direct and positive impact on humanity. Our DNA, which is distinctly African, Is harnessed by the concept of Ubuntu - an African proverb meaning I am because you are." Ubuntu embraces the idea that humans cannot exist in isolation and that we depend on connections, community, and caring. We cannot be without each other.

SMART CITIES

At SES engineers, we fuse science, mathematics and art to complex engineering problems. Our skilled professionals specialize in civil, roads and highways, structural engineering, finite element modeling, industrial buildings, water and sanitation, dams, pump stations, stormwater management for pre- development and post development, canals, earthworks and project and programme management.

Our teams possess an intricate knowledge of the African continent's socio-political and socio-economic terrain; using their diverse experiences to deliver ground-breaking and significant projects on the continent. These projects are executed with the zero-harm tolerance in safety, health and risk for not only human life but also for assets and the environment under the guidance of the SES engineers SHERQ support team

OUR PURPOSE IS TO SOLVE PROBLEMS, RISK-FREE & COST EFFECTIVE

SES ENGINEERS LEADERSHIP

Our Mission
Provide cutting-edge and innovative solutions, for creating shared value for all our clients and stakeholders.

Our Vision
To be an internationally respected engineering advisory firm offering sustainable solutions.

Nkonyane Musa Pr Eng PMP®
MBA MEng MSAICE MSANCOLD MWISA
Managing Partner

Musa is a civil engineer, program & project manager, public private partnership specialist with extensive experience in leadership, corporate strategy and managing complex infrastructure projects. He has vast experience in implementing projects in the Health Sector, Agriculture Sector, Mining Sector, Energy Sector, Water Infrastructure Sector, Commercial and Industrial Sector and the Transportation Sector.

He has led as a Director of Engineering at local government responsible for leading a diverse team, MTEF budgeting, implementing the IDP (2025 -2030) for Manzini Municipality, implementing and managing the city infrastructure assets.

Frans Pienaar Pr Eng BEng (Civil) MSAICE
Business Development Director & Partner

Frans Pienaar, a Swazi citizen, is currently an Investor and Independent Director with over 30 years' experience in the construction and built environment. He has served as Inyatsi Construction Group Chairman from December 2012 - October 2016. Having attained a Bachelor of Science in Civil Engineering from Stellenbosch University in 1987, he obtained registration as a Professional Engineer with the Engineering Council of South Africa in 1993 and a Full Member of the South African Institution of Civil Engineers in 2003 and was elected as a Member of the Institute of Directors in Southern Africa in July 2006. Frans also serves on several boards as a Board Director- Chairman of the Board of Challenge Ministries Swaziland; Chairman of Board - The Luke Commission; Chairman- Bulembu Ministries and Board of Directors- Royal Eswatini National Airways Corporation (Renac)

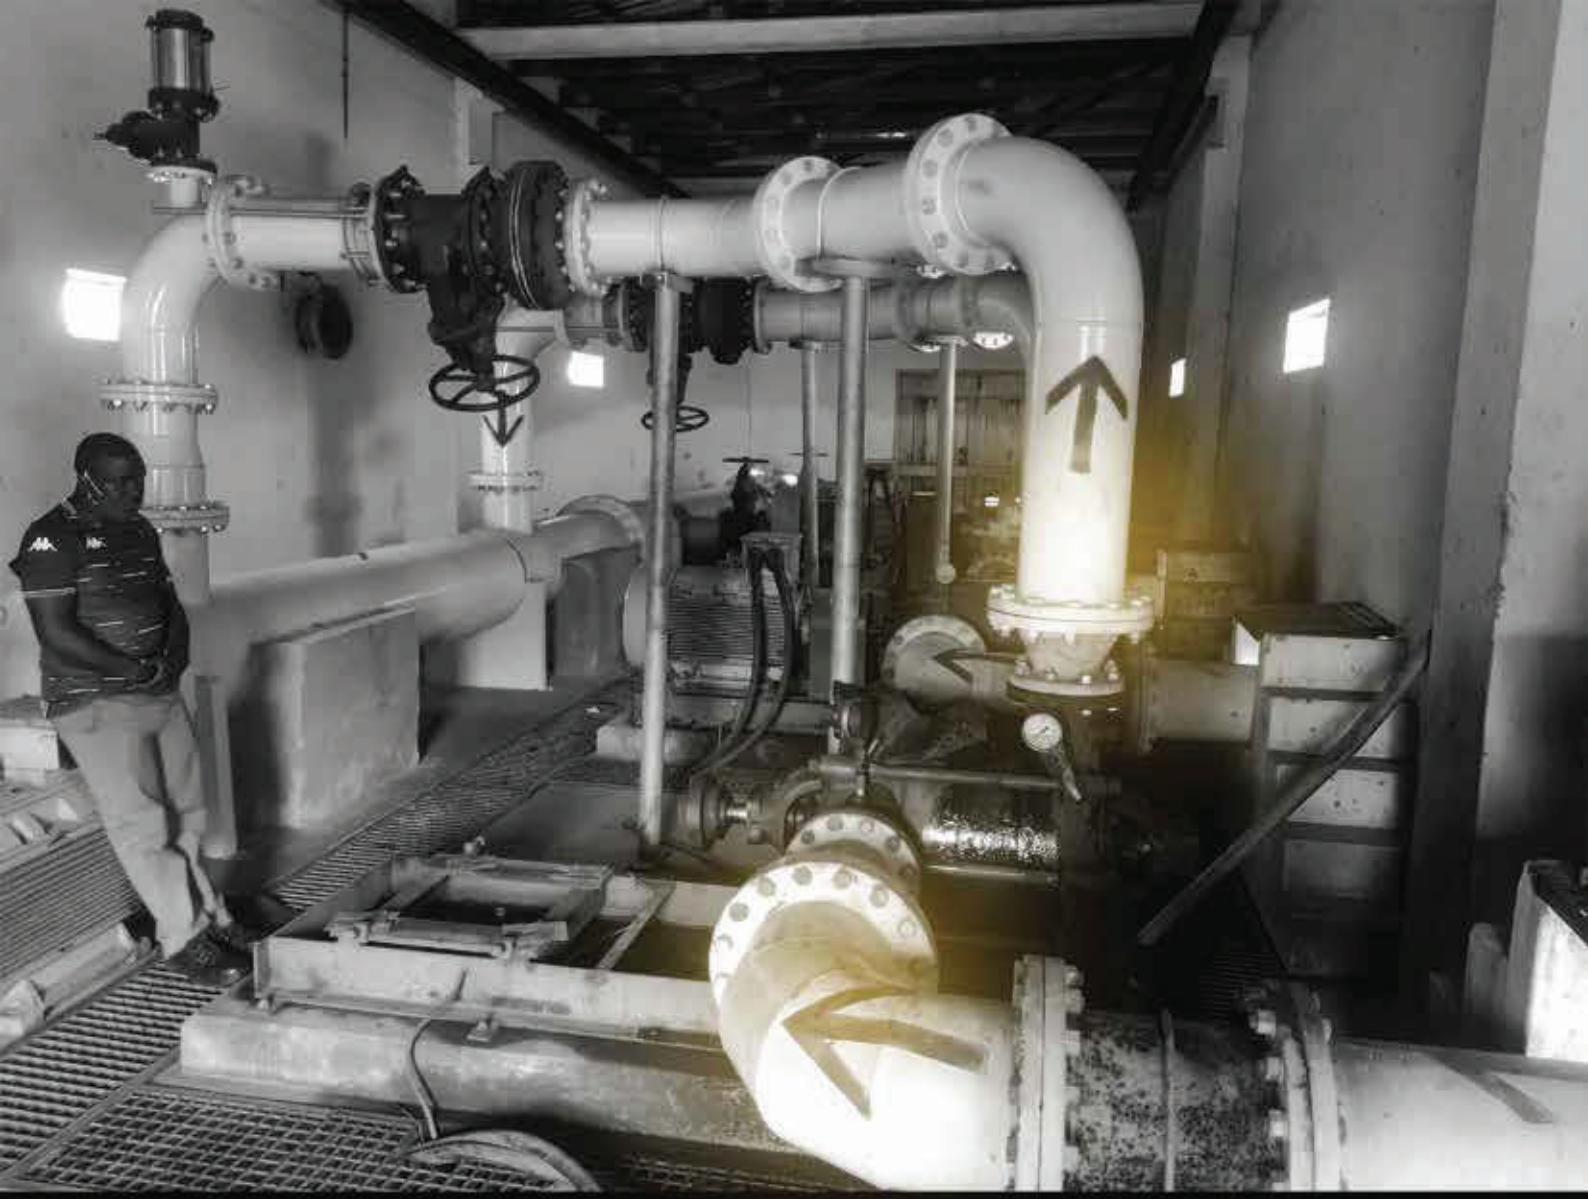

OUR LEADERS EMBOLDEN THE CHARACTERISTICS OF:

ONE THRIVING AFRICAN CONTINENT

INTEGRITY & TRUST

WEALTH IN KNOWLEDGE

HUMAN CAPITAL & TALENT

Our Values

Futuristic Respect & Integrity Playfulness Participation

SOCIO-ECONOMIC DEVELOPMENT

SES believe in and supports Skills Development and Social Upliftment and therefore gives back to society and communities through programmes including:

Young engineers initiative providing mentorship and training to graduates; social upliftment and development projects across various communities focusing on education; young talent and development.

OUR AFFILIATES

Sibanye has the following professional affiliations and accreditations:

Level 1 BBEEE contributor
ISO 9001: 2015 accredited

NHBRC SARF SANCOLD sabita ECSA saice CESA

WATER & SANITATION

WATER, SANITATION, AND HYGIENE

SES engineers is well equipped to provide solutions to the challenges of the present and future. Our skills and experience combine to deliver well planned and cost-effective infrastructure and environmentally sensitive solutions.

We apply our expertise in the fields of Water Resources, Water Quality and Water Treatment Processes to identify potential sources of water and match these with demands to develop reliable and sustainable solutions.

Imagine a future where we are able to proactively maintain all our water equipment using the (IOT) Internet of Things, reducing downtime of our most vital resources. Imagine a future where we are able to completely eradicate water shortages. This future is not that far away. INTERESTED? Come and chat to us.

SES engineers specialises in providing integrated solutions for the management of water treatment systems by incorporat ing the Internet of Things (IOT) which allows operators to monitor the functioning of the works real-time, resulting in early detection of problems.

Ground Water

We apply our expertise in the fields of Water Resources, Water Quality and Treatment Processes to identify potential sources of water and match these with demands to develop reliable and sustainable solutions.

Our Service Offerings Includes:

- Pre-Development Water Modelling
- Water Resource Studies (ground water, sea water and surface water)
- Water Transfer Feasibility Studies
- Hydrogeological Assessment
- Hydrological and Flood Risk Assessment
- Water Accounting and Valuation
- Water Quality and Disposal
- Integrated Water Management
- Water Use Efficiency
- Water Demand Management
- Master Planning
- Water Re-use & Recycling
- Regulatory Commitments
- Floodlines
- Asset Management
- Project Management
- Programme Management
- Environmental Compliance & Planning Studies
- Social Assessment, Planning, Needs & Impact Studies
- Social License to Operate and Permitting

REFERENCES

Water and Waste Water Conveyancing

SES engineers has extensive specialist experience, skills and knowledge of water and waste water conveyancing systems involving all project stages namely, Inception, Concept and Viability (Preliminary Design), Design Development (Detail Design), Documentation and Procurement, Contract Administration and Inspection and Close-Out in urban, industrial, resources and rural environments.

Our experienced engineers plan, model and design bulk water supply and distribution systems using state-of-the-art computer software programs, 3D modelling and Virtual Reality application, as well as Intelligent computing tools for both public resources and industrial facilities.

WATER REFERENCE

MR3 WEIGH BRIDGE

Customer: Inyatsi Construction
Location: Manzini, Eswatini

SES was responsible for a design and construction supervision of the water reticulation and the gravity sewerage network.

PROJECT VALUE: E8,000 000

MANZINI REGION SUSTAINABLE WATER SUPPLY

Customer: Eswatini Water Services Corporation (EWSC) / GIBB International
Location: Manzini

SES was involved with the pipeline design and the low-lift pump station design of Lot 1 of the project.

Project Value: E967,000,000.00

Construction of the Mkhondvo-Ngwavuma Water Augmentation Programme (MNWAP)

Phase 1B Lot 2 - Secondary Distribution
Lot 3 - Infield Distribution System
Maloma 1 & 2 - On Farm Development

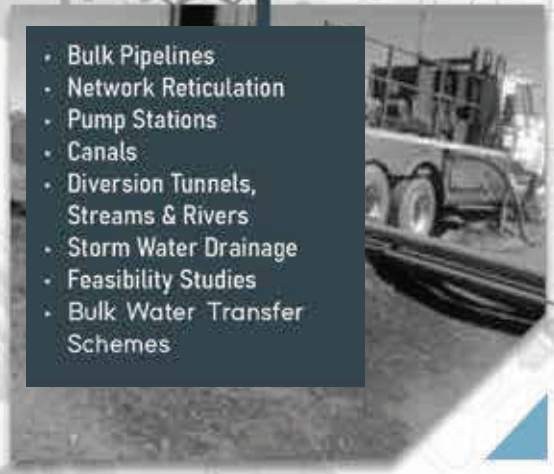

Customer: Eswatini Water & Agricultural Development Enterprise (EWADE)

SES was in a JV with ConsultCo and they were involved with the design of a 30km secondary distribution system with associated works.

Project Value: E360,000,000.00

Our Service Offerings Include:

- Bulk Pipelines
- Network Reticulation
- Pump Stations
- Canals
- Diversion Tunnels, Streams & Rivers
- Storm Water Drainage
- Feasibility Studies
- Bulk Water Transfer Schemes

Water and Waste Water Storage

SES engineers provides innovative, cost-effective and practical solutions to real world engineering challenges by combining advanced analytical techniques with sound engineering judgment.

Our service offerings include:

- Dams
- Water Storage-Reservoirs & Towers
- Pollution Control Dams
- Storm Water Attenuation Dams

Water and Waste Water Treatment

SES engineers has substantial experience, capability and knowledge of water and waste water treatment systems, involving all project cycles. We implement water and waste water systems through innovative design solutions, 3D modelling and Virtual Reality applications for optimised designs. These are for public resources and industrial facilities. We have a proven track-record in delivering technically outstanding, and cost-effective projects.

Our Service Offerings include:

- Water Treatment
- Waste Water Treatment
- Industrial Waste Water Treatment

Waste Water Re-Use

Water Crisis → Solution → Waste Water Re-Use

SES engineers has significant experience in Waste Water Re-use technology, which includes the provision of consulting engineering, project management and business or project services. Our in-house Professionals provide the best sustainable solutions to our customers and the environment over the full life cycle of the asset

Water Conservation & Non-Revenue Water

Conservation and Water Demand Management (WC/WDM) measures to reduce non-revenue water and water losses for water distribution systems. Our staff have the necessary expertise and experience to advise clients on which interventions are the most appropriate to a specific area and how best to implement them.

The most common mistake made by many institutions/ municipalities throughout the world is to believe that water loss reduction is achieved through only leak detection and repair. In such cases, large budgets are often used to search for unreported leaks using the latest hi-tech and expensive equipment. If the water losses are due to inaccurate metering or even background leakage, the leak detection activities will yield little or no results.

supply systems can be monitored and controlled via remote access using computers, mobile phones or tablets displaying real-time data of:

- Quality
- Flow Rates
- Reservoir Levels
- Pump Station Activities
- System Pressure
- Possible Leaks
- Water Consumption and Water Balance

REHABILITATION OF MANANGA HYDROMETRIC STATION
MANANGA, ESWATINI

TRANSPORTATION

SES engineers plays in the Airports, Rail, Road and Highway spheres.

Roads & Highways

SES engineers has extensive engineering apabilities in roads stormwater infrastructure on international as well as local levels.

Our wealth of experience across all phases of road projects includes national roads and highways, provincial and municipality:

Roads and highways.

- Haul roads
- Major transport corridors
- Bridges
- Culvert structures
- Detailed optimization
- Interface requirements
- Hydrology and hydraulic expertise
- Transport Master Planning

We provide services to the local governments and national governments

Smart Roads

Smart Road technologies and applications will shape the future of transportation in this Fourth Industrial Revolution. There cannot be a Smart City without a smart road and together a Smart City with smart roads can provide citizens with smart mobility.

The road infrastructure and mobility sectors face major challenges for the next century and a new paradigm that makes Smart Roads a reality is what is required to ensure that Smart Roads are integrated into the future

SES engineers is currently developing and testing technology through our Digital Solutions team to find ways of making South African roads smarter and safer for all users through the use of IOT (Internet of Things).

The smart Roads concept is much more than just sensors and feedback loops. Smart roads include:

- Smart pavements with sensors and feedback loops
- Smart electronic asset management systems
- ECO friendly roads (recycled materials)
- Climate change resilient roads
- Integrated systems adapted for future travel demand
- Green roads sustainable and low-cost (use of recycled materials)
- Self healing roads (concrete and asphalt)
- Solar panel road surfaces, inductive charging roads and innovative load bearing blocks.

TRANSPORTATION REFERENCE

CONSTRUCTION OF THE RIDGEVIEW TOWNSHIP ROADS
Customer: VIP Dry Cleaners (Pty) Ltd
Location: Malkerns, Eswatini
SES was responsible for the detail design, tendering, construction monitoring and project management of the township infrastructure.

Project Value: E6,000,000.00

CONSTRUCTION OF SICHOLO STREET AND IT'S ASSOCIATED DRAINAGE WORK
Customer: Matsapha Town Council
Location: Matsapha, Eswatini
SES was responsible for the detail design, tendering, construction monitoring and project management of Sicholo Street (1.2km).

Project Value: E5,000,000.00

SOLVING PROBLEMS RISK-FREE & COST EFFECTIVE

Rail

SES engineers' integrated design capability for rail infrastructure ensures optimisation and coordination through the Concept, Definition, Detailed Design and Construction Management stages.

We provide services to both the public and private sectors creating and delivering solutions for specific rail requirements in urban metropolitan and metro systems, long haul intermodal railway networks, heavy haul minerals railways, specialised rail transport for the rail industry and logistics providers.

Civil Engineering

- Bulk Earthworks Designs, where our approach is always to firstly, optimize cost by balancing cutand fill volumes as far as possible but taking cognisance of ground conditions.
- Roads and Stormwater Designs for building projects are always done in conjunction with the appointed Architects, Landscape Architects and Green building Consultants.
- Water and Sewer Designs which make provision for both Internal (on-site) as well as external (bulkoff-site), with good cooperation and coordination with the Architects being of vital Importance. On-site solutions and re-use of effluent water are critical considerations at the planning stage of a project

Structural Engineering

High Rise Buildings

- Offices
- Apartment blocks
- Hospitals

Low Rise Buildings

- Schools
- Correctional Facilities
- Apartments

Industrial

- Factories and manufacturing areas
- Dedicated Industrial Structures
- Sport and Recreational Facilities
- Indoor
- Outdoor

Revitalising the Built Environment

- Investigation and reporting on structural integrity of damagedbuildings
- Restoration, reinstatement or alteration of existing building structures for alternative use

STRUCTURAL REREFENCE

MULTI-STOREY BUILDINGS

Customer: Several Clients
Location: All Over South Africa

Structural Designated Multi-story buildings

Luke Commission Staff Development Centre

Customer: The Luke Commission
Location: Sidvokodvo, Eswatini

Structural Engineering
Pedestrian Bridges - MR3 Highway

Customer: Inyatsi Construction
Location: Manzini

The R52 Million, 3 No of Pedestrian bridges along the MR3 Lot 1 entailed designing a concrete and steel composite structure bridges. Our Company was also involed with the construction supervision.

CONSTRUCTION OF THE STAFF DEVELOPMENT CENTER (SDC)

Customer: The Luke Commission
Location: Sidvokodvo, Eswatini
SES was responsible for the structural design of the SDC building.

Project Value: E10,000,000.00

CONSTRUCTION OF 4NO PEDESTRIAN BRIDGES ALONG THE MR3 PUBLIC ROAD

Customer: Inyatsi Construction
Location: Manzini, Eswatini
SES was responsible for the structural design of 4No. structural steel pedestrian bridges.

Project Value: E18,000,000.00

CONSTRUCTION OF THE UNIFOODS FACTORY SHELL

Customer: UNIFOODS
Location: Matsapha, Eswatini
SES was responsible for the civil and structural design and project management of the factory shell.

Project Value: E20,000,000.00

REHABILITATION OF THE BUY CASH WAREHOSE

Customer: BUY CASH NIFOODS
Location: Sidwashini, Mbabane, Eswatini
SES was responsible for the civil and structural design of the warehouse.

Project Value: E20,000,000.00

CONSTRUCTION OF THE NATIONAL HEALTHCARE WASTE FOR THE KINGDOM OF ESWATINI

Customer: NERCHA
Location: Matsapha, Eswatini

SES was responsible for programme and project management services.

Project Value: E46,000,000.00

ENERGY

CREATING A SUSTAINABLE WORLD FOR OUR FUTURE GENERATIONS

Increasing droughts and cyclone activities expose Africa's vulnerability to the intensifying consequences of climate change.
Considering that about 60% of people who lack access to electricity live in Africa, it is our moral imperative to uplift these struggling communities.

Especially in view of Africa's vast solar resource, Sustainable Energy is the solution to both mitigating climate change and providing access to clean electricity in remote rural areas.

To enable a planet powered by renewable resources with its intermittent supply, energy storage must be at the forefront of technological innovation.

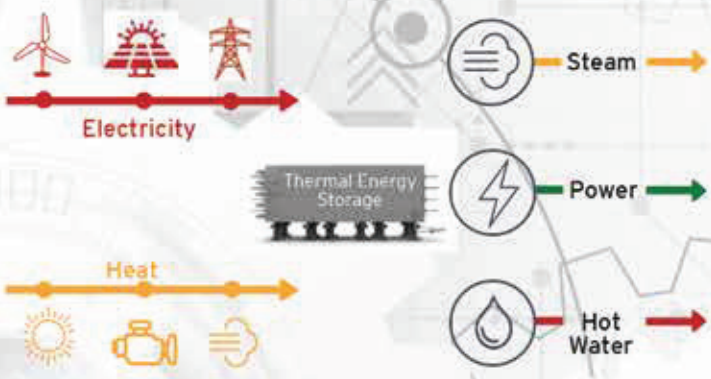

The industry must expand and advance its creativity and development to enable the complete replacement of fossil fuel generation with renewable energy.

In response to the need for cost- effective storage solutions, we have identified innovative energy storage technologies, which will enable further deployment of renewable energy

Imagine a future where all energy supplied matches demand in real time or where every solar farm is monitored ensuring optimal energy capture thus significantly reducing dependence on other energy sources. This future is not that far away. INTERESTED? Come and chat to us.

The bGen

This technology is particularly interesting for industry, where electricity meets waste heat, steam and process heating & cooling. The bGen system uses South African rocks for thermal energy storage. Energy can easily be transferred from one form to another, whilst being stored in high-exergy heat. The system is modular and space-efficient.

POWER REFERENCE

EMANDLA SOLAR PHOTOVOLTAIC PLANT

Customer: Eswatini Electricity Company (EEC) / Eswatini Energy Regulatory Authority

The Project entails the construction of 15MW Photovoltaic plant to be connected to the Grind. The project had the following phases:

- Feasible Studies
- Detailed Design
- Construction
- Close-out

Project value: E500 000 000

LAVUMISA BORDER PROJECT

Customer: Eswatini Revenue Authority

Services: - Project management
- Quality assurance

Project value: E6 000 000

.....

Good Shepered, Central Medical Stores, Lubombo Hospital and Mankayane

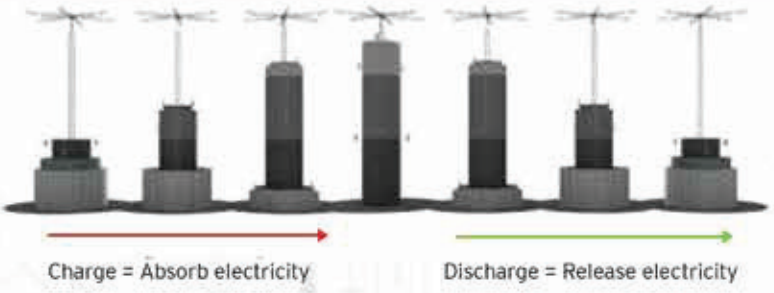

Customer: Ministry Of Health through NERCHA

Services Offered: - Project Management
- Quality Assurance

Project value: E12 000 000

Our key energy solutions include:

- Energy storage (kinetic, thermal, chemical)
- Renewable Energy
- Solar PV
- Solar Thermal (including CSP)
- Wind
- Co-/Tri-/Quad-generation
- Energy Efficiency

NSOKO SOLAR PHOTOVOLTAIC PROJECT

Customer: Eswatini Energy Regulatory Authority

The project entails the construction of 13.34 MWp Photovoltaic plant.

Services: Project Management
Quality Assurance
Supervision
Preliminary Design

UNDP Just Energy Transition (JET) Project

Customer: United Nations Development Programme

The project aims to enable access to clean, affordable energy for all. With estimated 1 MW power.

Services: Project Management
Quality Assurance
Supervision
Preliminary Design
